SUBJECT

The programme of Mr Garalapurasastrus course of studies

Serial 1) Mr Garalapurasastru submits a programme of his course of studies letter dated 9/10/13 from London

Serial 2) From the S G of Edn No 5172/288 dated 29/10/13 forwards a copy of a letter from Mr J W Arnold prescribing a course of studies to Mr Garalapurasastru

Serial 3) From the S G of Edn D O 5412 dated 11-12-13 A Cable to Mr Garalapurasastru to continue the present course for a year

Serial 4) From the S G of Edn 7164/379 dated 18/12/13 Copy of a letter from Mr S Garalapurasastru

Serial 7) From the S G of Edn no 171-2 dated 3 7 14 Copies of Correspondence between Mr Garalapurasastru & Messrs Alexander & Co

Serial 8) To the S G of Edn 1406 dt 23 11 14 Requests the S G to suggest a suitable course of study until the question of practical training is settled

Serial 9) From the S G of Edn 9870/429 dt 9 12 14 After the receipt of reply from Mr Sastru action will be taken to submit the course for the approval of the Government

recommended by the Prof of Chemistry at University College London - that may be taken as a sufficient guarantee of its technical status

The premium of £500 a year seems very reasonable for really practical instruction in the processes of the Trade

No information is furnished as to the amount to be deposited with the Firm, nor the length of time the deposit is to be made The proposal is a curious one and not customary in business It looks to me as though the firm were not at all anxious to take Mr Sastri as a pupil The firm will certainly want the money deposited with them - probably not less than £2000 possibly £5000 but the term of years should not exceed three & 4 per cent interest should be paid by the firm on the deposit

I hope Mr Sastri is a sufficiently practical young man to make it worth while to spend this money on him

34 I do not think any endorsement by our bankers will satisfy the firm in a case like this They would want a ~~very~~ large sum probably from £2 000 to £5 000 as stated by Mr Chatterton to be deposited with them to be forfeited by them instantly if in their opinion the conditions are violated

35 In my opinion ~~the~~ a premium of ~~Rs~~ Rs 7 500 a year and a deposit of Rs30 000 to Rs75 000 liable to forfeiture are exceedingly unacceptable terms

36 - I know that many students have gone to foreign countries for example Japan America etc and learnt soap-making and allied industries without incurring such heavy expenditure and risk It cannot be said that the training got by these students ~~do~~ was incomplete or indifferent, for some of them have started soap works on a commercial scale on the basis of such training and some of these ~~have~~ concerns have proved successful One such student I learnt the other day who had returned with foreign training and started ~~an~~ a soap factory in Calcutta and managed it for five years successfully, is now unemployed The proprietors of the factory have put one of their own men as manager and dispensed with the services of this man Valuable information as to how these men manage to get practical training can be obtained from the Association for the scientific and industrial training of

Indians

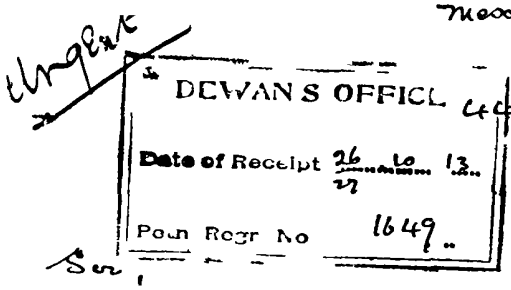
9 10 13



Sir,

I paid a Visit to the University College, London, yesterday, and had a discussion with Prof F G Donnan, M A, Ph D, F R S, about my intended course of studies. We talked about it in Consultation with Dr R W Gray also and as a result of our Consultation we came to the Conclusion "that it will be best for me, to join the University College London, for a period and work there, ~~and~~ while working there I shall have to attend the

College of Technology or still better under some technical expert. This year's work will involve a minuted detailed study of the special lines, Subject- so far as the experiments can be conducted in a Laboratory. In my opinion a technical draughtsmanship would answer my purpose admirably.

Next year, ie the third year Course is the most difficult one. This should be in a factory manufacturing the things and doing business also on the line I want to specialise Prof. F.G. Donnan promisses me that he would use his influence and get me an

admittance into a good factory where I can learn the practical details - (and possibly some of their secrets also) of the work and this year I shall have to specialize heavily. It is a remote chance, but still, I may mention, that I may have to stay some time more at the factory in case it is deemed necessary.

While working in any one place I shall have to visit as many technical Laboratories as possible and I shall let not so any opportunity to do so

Physical Chemistry Laboratory and do some work in that branch This won't take a long time Then while I'm there attend a Course of lectures on Engineering (mechanical, Chiefly - just enough for my purpose in erecting machinery etc) and learn also machine drawing and other Kindred Subjects All these things will be done in the first year

The second year is to be devoted to a special industry (If the Government approve it, I shall take up Soap & Candles) the detailed study of the Scientific portion of the subject This will also be either at the University College London or in some School or

This week I heard also from Mr. Dadachanji, one of my colleagues that was studying in the Indian Institute of Science and that is now working at the Polytechnic Institute at Charlottenburg (Berlin), and he tells me that it is very good to go and join the Polytechnic and be working there until I get a chance of entering into a factory. He assures me that I can do the scientific portion of the work, and as for conducting the experiments on a manufacturing scale, it is not at all possible to do so in any technical Institute. The only things I could

Sir T. W Arnold, the Educational adviser to the Indian Students, approves of the plan set forth by Prof Donne.

I shall be awaiting the reply of the Government and I shall not take any further steps until I hear from them

In the meanwhile, I have joined the University College, London provisionally for six weeks only by the end of which time I shall be anxiously expecting the letter from

(8)

the Government

I shall feel very much
obliged if the Government will
kindly send me an early reply
I have had half the terms fees
for these six weeks, and I shall
have to discontinue at the end of
that time If after discontinuing
once, I join the College ~~once~~ again
I shall have to pay the full terms
fees. But if I continue without
break after these six weeks, I need only
pay half the terms fees

I remain Sir,
Your most obedient servant
S L Sasby

do here will be, to be attending the Laboratory and be Conducting experiments in my line I can also learn the Engineering portion of my work also The Polytechnic is efficiently staffed also

Some other Consultations and inquiries which I made since my arrival here are not worth mentioning

Prof F-G Donnan promissed me that he would write direct to the Government of Mysore stating his plans of work and he further told me that he will be pleased to enter into Correspondence on that subject with the Mysore Government

THE PROVOST

DEWAN'S OFFICE
Date of Rec pt 26 10 13
27
Petn Regr No 1650

9th October 1913

Dear Sir,

I understand from Mr Sastry that he has been sent to Europe by the Mysore Government to study all or any of the following branches of technical chemistry

(1) Oils and Fats

(2) Soap, Glycerine and Candles

(3) Wood Distillation

I also understand that Mr Sastry will have three years, and possibly four, to spend on this study

Mr Sastry informs me that he is expected to return to India and direct, under the Mysore Government, the erection and running of a factory undertaking work under one of the previously mentioned branches of applied chemistry For this purpose I think it will be necessary for him to spend the first year in the improvement of his scientific knowledge, especially as regards physical chemistry, This he could do very well at University College, London During this period he must also study a certain amount of engineering and engineering drawing, and also French and German if he is unacquainted with those languages

After that Mr Sastry must study

(1) the methods of testing and analysis employed in the industry in which he will specialise

(2) the practical construction, working, and management of a factory in this industry

The latter condition presents very grave difficulties It is absolutely essential if Mr Sastry is to take any <u>initiative</u> in the actual planning, erection, and running of the proposed

(2)

But the vast majority of works will refuse to take in a student such as Mr Sastry

Should he elect to make a special study of soap, glycerine, and paraffin candles, it is possible that I could arrange with friends of mine, who are manufacturers of these commodities, to take him in and teach him This could only be done, however, by a special arrangement between my friends and the Mysore Government

I am quite willing to help in the making and carrying out of such an arrangement

The methods of testing and analysis, referred to under (1) can be learnt at various Universities and Technical Colleges, but in my opinion such preparatory training should be supplemented, if possible, by a period of work in the testing laboratory of a Works

I shall be very pleased to enter into a further discussion of Mr Sastry's future work with the Mysore Government, or their representatives in England

I am,

18-11-13

To

The Inspector General of Education in Mysore
Bangalore

Sir

Thanx you very much indeed for your D O dated Bangalore 23rd October 1913

In accordance with the cable (communicated to me through Messrs Coutts & Co) of Saturday the 15th November I have joined the University College London I have been admitted as a post-graduate student into the research branch of the Physical Chemistry Department

I may briefly mention here that my first year's work consists of some training in Physical Chemistry in Machine design and Machine drawing etc (so far as it is useful for the purpose of my special study) and some new investigation in connection with my special line viz Soaps and Candle and Glycerine The latter thing i e the research will be suggested by the Professor in consultation with the Manager of the factory where I am to get an admission I can carry on the experiments on a large scale after I go to the factory

Prof Donnan D Sc , Ph D F R S , has told me that in all liklihood I shall have the chance of getting into the Factory next year only and I am only too glad if that is so The factory is that of Messrs Findlay's Soap and Candle Works at Belfast It is through the kindness and recommendation of Prof Donnan that I can get an admittance there and he has promised me that much This is

is indeed more than I hoped for since it is the most difficult thing to secure an entrance into a factory The condition on which the factory stipulates will be that I shall not use the knowledge obtained there against their interests anywhere in Great Britain and Ireland The student will be at perfect liberty to start any factory outside this area

Mr Hashmat Rai B A M Sc (Govt of India Scholar from the Lahore Government College) who was working for one year in the said factory has assured me that I can get what all assistance I want in that line "If there are any more secrets of the trade which I have not learnt" he said "it is on account of my own fault and not theirs and they hid nothing from me"

Further it may be of interest to you to know that Mr Rai and Mr Findlay have taken a patent for an important process of manufacture This I quote simply to prove what immense facilities I can get in the said factory which is very chary of admitting an English Chemist who will not be bound down to them for life! They generally do not employ German and American Chemists on account of their own reasons nor are these it seems to me very anxious to go there except with a special aim of "stealing" some secret

I hope to be pardoned for a lengthy report as this but I thought it were better these things were known clearly to you Please let me know if you require any further details about my studies

May I request you Sir to forward this letter to the Government for their information?

I remain Sir
your most obedient servant

No 7169 / 379 Enc 1

Bangalore 10th December *1913*

From

M SHAMA RAO Esq MA
Inspector General of Education in Mysore

To

C S Balasundaram Iyer Esq B A
Secretary to the Government of His Highness the
Maharaja of Mysore Depts of Education & Agriculture

SIR

I have the honour to submit herewith for the information of Government copy of letter dated the 18th November 1913 from Mr S Garalapuri Sastri who was granted a foreign scholarship in Government Order No 2196-8/Edn 346-12-5 dated 22nd August 1913

I have the honour to be

Sir

Your most obedient servant

M Shama Rao

Inspector General

TNR

18

c/o Messrs Coutts & Co
Bankers
440 Strand London
18-11-13

To

The Inspector General of Education in Mysore
Bangalore

Sir

Thank you very much indeed for your D O dated Bangalore 23rd October 1913

In accordance with the cable (communicated to me through Messrs Coutts Co) of Saturday the 15th November I have joined the University College London I have been admitted as a post-graduate student into the research branch of the Physical Chemistry Department

I may briefly mention here that my first year's work consists of some training in Physical Chemistry in machine design and machine drawing etc (so far as it is useful for the purpose of my special study) and some new investigation in connection with my special line viz Soaps and Candle and Glycerine The latter thing i e the research will be suggested by the Professor in consultation with the Manager of the factory where I am to get an admission I can carry on the experiments on a large scale after I go to the factory

Prof Donnan D Sc Ph D F R S has told me that in all likelihood I shall have the chance of getting into the factory next year only and I am only too glad if that is so The factory is that of Messrs Lindlay's Soap and Candle Works at Belfast It is through the kindness and recommendation of Prof Donnan that I can get an admittance there and he has promised me that much This

is

19

Indeed more than I hoped for since it is the most difficul- thing to secure an entrance into a factory The condition on which the factory stipulates will be that I shall not use the -no ledge obtained there against their interests anywhere in Great Britain and Ireland The student will be at perfect liberty to start any factory outside this area

r Hashmat Rai B A 'Sc (Govt of India Scholer from t'e Lahore Government College) who was wor ing for one year in the said factory has assured me that I can get what all assistance I want in that line "If there are any more secrets of the trade which I have not learnt" he said "it is on account of my own fault and not theirs and they hid nothing from me

Further it ma be of interest to ou to mo / that r ai and r lindlay have ta ten a patent for an important process of manufacture This I quote simpl to prove what immense facilities I can get in the said factory which is very clear of admitting an English Chemist who will not be bound down to them for life ney generally do not employ German and merican Chemists on account of their own reasons nor are these it seems to me very anxious to go there except with a special aim of 'stealing' some secret

I hope to be pardoned for a lengthy report as this but I thought it were better these things are known clearly to you Please let me know if you require any further details about studies

May I request you Sir to for / rd this letter to the Govern- ment for their information?

I remain Sir
Your most obedient servant

SIR

flag S

In continuation of correspondence ending with my D O No 547 dated 11th December 1913 regarding the course of study to be followed by Mr S Caralapuri Sastry Damodardoss scholar during the first year I have the honour to forward herewith for orders of Government copies of letters dated 5th June 1914 and 8th June 1914 from Mr Sastri giving the details of an interview which he had with Messrs Alexander Finlay Ltd Soap Candle and Glycerine Works Belfast in the matter of their taking him in as an apprentice in their factory on certain conditions to be settled between the Mysore Government and the owners of the Factory If approved by Government I shall communicate with the Factory owners and ascertain their terms

I have the honour to be
Sir
Your most obedient servant

M. Rama Rao

M. Inspector General

21 Enc to Edu 16c 73)

Letter dated 5th June 1914 from r [illegible] Parala[illegible]ari Sastr[illegible] to the Inspector General of Education in Mysore

---- -

ccordin[illegible] to the instructions of the Govern ent I have been studyin[illegible] in the University College London The first term was chiefly confined to some work in Physical Chemistr[illegible] and the second term was spent on some small investi[illegible]ation concernin[illegible] the bleachin[illegible] of Palm oil and at the same time in attendin[illegible] the classes on Engineerin[illegible] drawing (seven hours a week) The next term commenced on the 2 th of April and will be con fined to (1) Engineerin[illegible] drawin[illegible] as before (2) E a ration and anal sis of oils fats soaps &c

That finishes off my first ear's prog ram e and b the end of the year I shall be I hope quite conversant with almo t all the laboratory work connected with oils fats soaps etc

The next and the most important thin[illegible] that is to be under-taken is to get experience in soap works and obtain the necessar factory trainin[illegible] This is absolutely essential in order that I may get a thorou[illegible]h and sound know le ge of the particular industr before I can undertake an such concern on my return to India

As you are well aware the factor o ners are extrem ly jealous of their secrets and will go to great lengths to guard them as much as it lies in their means and power So much so most of the factories will not even admit visitors to their places least of all science students and other persons suspected of havin[illegible] an interest in the industry - it may be pointed here that even a visit to soap factories which trade with India is impossible - for the simple reason that the are to a certain extent already afraid of Indian Competition and hence tr to kee off the Indians from their premises as much as possible

Last month I went to Belfast with the object of inter

22

interviewing the owners of the firm essrs Alexander Linlay Ltd (Soap Candle and Glycerine Works Victoria Square Belfast) I discussed the question of my working in their factory for a period of two years and they seem to be quite willing to allow me to work in their place subject to one or two conditions

The first and the foremost is that I should bind myself not to use the knowledge gained there anywhere else except in India The next one which is of considerable importance is that they require a sum of money to be deposited with them and to be forfeited by us in case the conditions laid down are in their opinion violated by me They seem ~~xx~~ disposed to legally bind themselves to give me a sound and thorough training about everything connected with the Industry of soap candles and glycerine to the extent to which it is done in their own factory For example the secret recipes for the manufacture of things the manipulation of the particular machinery etc the best sources of raw materials etc etc In fine to keep me in touch with all the practical and working details of the industry concerned in all its three aspects (1) Chemical (2) Engineering and (3) Economical For this training they would expect a fee of £125 per quarter payable in advance

From what I could gather from the conversation I had with them, it looks as though they may admit me into their place on payment of a lesser fee in this case not binding themselves to teach me anything but never hindering me from picking up what all I can out of my own observation and occasionally helping me whenever they have time to do so

In any case they are perfectly agreeable to enter into correspondence and discuss the question with the Government of Mysore if the Government write to them

I have enclosed copies of two letters which I had from the ~~xx~~ firm after my return from Belfast

Awaiting instructions

SOAP CANDLE & GLYCERINE WORKS

BELFAST 28TH APRIL 1914

Mr S G SASTRY B A F C S
REDGRAVE HOUSE 99 SOTHEBY ROAD
HIGHBURY PARK N LONDON

Dear Sir

While we were prepared to entertain the proposal that you should come to us to study the manufacture of Soap and Candles practically on the terms mentioned to Professor Donnan by our Mr Robert Finlay we are advised by our solicitors that as regards a guarantee that you would protect our interest and do nothing contrary to them after leaving us the only effective guarantee would be to have a money deposit to be forfeited to us in case you should in our opinion violate the agreement to be entered into We suppose this would be an insuperable barrier to your coming to us Besides we are advised that from the experience of other firms who have tried similar proposals they have never been a success We therefore regret to say that we do not see our way to accede to your request to come to our works

Yours truly
(Signed) ALEXANDER FINLAY LTD

SOAP CANDLE & GLYCERINE WORKS

BELFAST 14th May 1914

Dear Mr Sastry

I am in receipt of your favour of 13th instant We did not exactly say that we would not receive you under any conditions whatsoever What we did say was that we thought the condition proposed by our solicitors would be insuperable and therefore we could not see our way to take you in If you find this condition is not insuperable then we might see our way to take you in We would suggest that you write to the Mysore Government pointing out the terms upon which we had thought of taking you in and at the same time giving them the condition which our solicitors asked us to put forward You might also tell them that if they are agreeable to the condition laid down they might write to us direct stating exactly what they require I think that this would be sufficient If however you have reason to believe that they require a fuller letter from you in the first instance it would be better to let me see copy of what you propose sending there were several points in the letter you had written for the Mysore Government which were not quite accurate

Yours sincerely

(Copy) (Signed) ROBERT FINLAY

Inspector General of Education.

Enc 15
Edn. 16873/25

Letter dated 8th June 1914 from Dr S Caralapuri Sastry to the Inspector General of Education

---

It is a long time since I sent in a detailed account of my travelling expenses I hope you have received it in time

Last week I have sent in a report of my work here and also a letter with regard to my spending sometime in a factor Out of the several factories where I tried that at Belfast is the only one that consented to receive me under the conditions to be settled

If the Government should think that Messrs Alexander Kinlay Ltd demand too high a premium and as such I cannot be sent there to work may I request you to let me know if you will permit me to go to Germany and try to enter into a factory there?

Since I cannot be expected to be wasting my time while trying to enter into a factory I propose to specialize in Organic Chemistry in one of the German Universities and at the same time tr to get an admission into a factory and if an opportunity offers itself during that time either in Germany or in England to go and work in a factory I shall relinquish Organic Chemistry and join the Soap Works May I request you to let me know if I have your approval of the above scheme?

Since I have to apply for a seat in the Laboratory quite

early I shall feel highly obliged if you will kindly expedite the matters and send me an early reply Meanwhile the Educational Advisor Mr T I Arnold has been making inquiries on my behalf with several other scientific workers that I have not tried myself Any outcome of those inquiries worth mentioning will be duly communicated to the Government

If I cannot get the reply of the Government in time to secure a seat in one of the German Universities I shall be continuing in the University College London as a research student in Organic Chemistry

Since I came to London outside the College work I have attended almost all the meetings of the Chemical Society of London all the lectures and colloquium meetings of the Chemical and Physical Society of the University College a course of six special advanced University lectures on the Manufacture of sulphuric acid and alkali and a few more shorter courses of advanced lectures on Chemistry

I had an occasion to visit (i) Bryant and Mays Match Factory (ii) British Oxygen Manufacturing Company (iii) Woolwich Sulphuric Acid Works and (iv) Barday and Perkins Brewery All these are amongst the biggest of their kind in England

Hoping to receive early instructions

Copy

Yours sincerely
Inspector General of Education.
